

PROTECTING POLLINATOR HEALTH

South

Understanding Our Pollinators

Bees pollinate more than

16%

of flowering plant species.

*Including those found in yards, landscapes, and parks in our communities and across the country.**

Creating a Pollinator-Friendly Garden

A balanced bee diet includes nectar and pollen. Planting a variety of pollinator-friendly plants gives pollinators multiple flower shapes and continuous blooms from which to choose.

- 1.** Choose **native flowers and plants** when planning your garden.
- 2.** Select plants with a **variety of flower colors, shapes and sizes.**
- 3.** **Clustered flowers of one species** will attract more pollinators than individual plants.
- 4.** A healthy pollinator garden offers bees clean water sources scattered throughout.

Choosing Pollinator-Friendly Plants
